

MSS GLOBAL ONLINE ASSURANCE ASSESSMENT

MSS GLOBAL'S EXCLUSIVE ONLINE ASSURANCE TOOL

MSS Global has formed an exclusive alliance with Robian Global (www.robianglobal.com) to design and deliver a suite of online assurance assessment tools to support both the private security industry as well as the larger government contractor community.

Our jointly developed assessment tools extend beyond traditional auditing techniques. Working with the fundamental requirements of any standard (or client-defined specifics), we are able to measure both compliance and the experienced effectiveness of the system and desired business behaviors.

Our online assessment can stand alone or be used in conjunction with traditional audit techniques. It is particularly effective at identifying risk areas which can instruct our clients where to focus on-site or internal audit resources.

Our online assessment tool is:

- A highly effective tool, that gives profound insight into the operational effectiveness of an organization's business management system.
- An investment of only a few minutes for participants to complete each assessment.
- A simple, online interface through which participants are prompted to access a series of carefully crafted statements. After reading each statement, they can select the response from a range of responses presented to them, that most accurately describes their experience in relation to that statement.
- It supports dispersed and centralized organizations through cost effective online assurance assessment.

- A platform for internal auditors to contribute to the assessment via recording of hands-on sampling of documented information and observation, adding real efficiency through reducing the need to travel to site, and helping to focus those visits.

Our online assessment is not:

- A survey as participant's opinions are not sought, just their actual experiences;
- A series of leading questions to seek judgements based upon personal values;
- A tool to seek out non-performing individuals as all contributions are anonymous.

Our online assessment can:

- Produce clear, comprehensive reports that not only pinpoint areas of the business where compliance to a standard (or your requirements) is achieved, but also any areas that require attention;
- Evaluate the level of business management effectiveness by comparing the results against recognized business drivers as well as the clauses of respective standards. By adopting this approach, we gain an indication of not only the level of compliance, but also business outcomes being experienced by employees;
- Deliver superior, cost effective results when compared to traditional internal audit techniques alone.

Our online assessment tool has been:

- Created by certification and assessment specialists with many years experience of working with international ISO management systems and the respective industry bodies;
- Crafted to help all organizations, especially those seeking to evaluate their own compliance with standards and requirements, or just wishing to improve their business processes to achieve desired outcomes;
- Reviewed by UKAS, (international accreditation

body) who are fully aware of the approach and logic used within our assessments, and how it complies with all requirements relating to internal audit/assessment within registered companies;

- Developed so that it does not require any special software; just internet access;
- Designed to ensure that no personal information is submitted by assessment participants, thereby eliminating inhibition and major data security issues.

Our online assessment features:

- An enterprise risk management approach to business assessment;
- A fully online system that is accessible wherever an internet connection and a device that supports internet browsing is available;
- A fully-flexible system that can be customized to measure performance against any criteria such as specific business objectives and desired outcomes;
- A combination of participant experiences and hands-on checking to give a fuller picture;
- A network that can support any assessment from just a few participants to many thousands;
- A scalable, tailorable platform that is only limited
